Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation. The present sequence represents the coding sequence of rat HICP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                  The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation. The present sequence represents the coding sequence of rat HICP mature
                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC test cell population (CP) comprising cells expressing nucleic acid sequences (S) of OSTI-47 and 48, with a test agent, measuring nucleic acid companies of the ligand and agent by the difference in expression levels. Also described is a method (M2) for treating a bone disorder in a subject by administering to the subject an agent that modulates the expression or companies to the subject an agent that modulates the expression or companies that modulates the expression or companies that modulates the expression or companies to its modulate the expression of OST 1-48, and can also be used to modulate the expression of OST 1-48, and can also be used in gene companies (M) is useful for identifying parathyroid hormone receptor ligands (I) or osteoregenerative agents. OST gene sequence can be used for assessing the osteoregenerative activity of a test agent in a companies of companies of a treatment of a bone disorder in a companies to raise anti-OST antibodies (II). Parathyroid hormone receptor ligands: (I) identified by (MI) are useful for treating bone companies. The present sequence represents an OST23 gene fragment contained from rat tibiae, from the present invention.

                                                                                                                                                                                                                                                                                The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by abberrant HICP protein activity or expression. Probes capable of hybridizing to HICP make or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation. The present sequence represents a nucleotide sequence encoding the insulinlike growth factor binding protein (IGFBP) domain of HICP polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;

                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                    The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by abservant HICP modulators can be used to reapression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation. The present sequence represents a CDNA encoding the Von Willebrand C (VWC) a domain of the HICP polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Heparin-induced CCN-like protein; HICP; cell-associated activity; ss; cardiovascular disorder; aberrant cell proliferation; fibrotic disorder; Von Willebrand C domain; VWC.

Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity HICP modulators can be used to treat disorders characterized by aberrand HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation. The present sequence represents a nucleotide sequence encoding the thrombospondin 1 (TSP1) domain of the HICP polypeptide.

                                                                                                                                                                                                                                                                CC The present invention describes Wnt-1 induced secreted polypeptides, CC WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 CC and WISP-3 have homology to connective tissue growth factor (CTGF). CC Products from the present invention can be used to treat WISP-related CC products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, CC leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, CC hypothalamic and other glandular, macrophagal, epithelial, stromal, and CD hlastocoelic disorders, haematopoiesis-related disorders, tissue-growth CC disorders, skin disorders, desmoplasia, fibrotic lesions, kidney CC disorders, bone-related disorders such as osteoporosis, trauma such as CC burns, incisions, and other wounds, connective tissue disorders. The products can also be used for detertion and diamnosis esnociality of products can also be used for detertion and diamnosis esnociality of

                                                                                                                                                                                    õ
                                                                                                                                                                                                                                                                                          The present invention describes Wnt-1 induced secreted polypeptides, CC WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). CC Products from the present invention can be used to treat WISP-related CC disorders such as breast, ovarian, and colon cancer or melanoma. The CC products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, compared to treat and lymphoid malignancies, neuronal, glial, astrocytal, and the products can also be used to treat other diseases e.g. benign and malignant tumours, composed to the products can also be used to treat other diseases. The products can also be used disorders, macrophagal, epithelial, stromal, and composed collastocoelic disorders, desmoplasia, fibrotic lesions, kidney considered disorders, strauma such as the products of the products such as osteoporosis, trauma such as composed inclaimentory, considered the products can also be used for detection and diagnosis especially of considered considered in the production of transgenic or knock-out animals. CC can be used in the production of transgenic or knock-out animals.
                                                                                                                                                                                                                           Query Match

                                                                                                                                                               messenger NNAs that populate a (sub-)transcriptome, where the CC (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises comprises several oligonucleotides, each capable of hybridising selectively to a comprise of the genome, which encodes one or more messenger RNAs plice variants. The oligonucleotide libraries are useful for detecting mnNas from a companient of the penome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mnNas from a companient of the corresponding transcriptome, and in companient transcripts and splice variants of human or animal companient transcripts and splice variants of human or animal companient to detect transcripts of a sub-transcriptome under a companient to detect transcripts of a sub-transcriptome under a companient to detect developmental specific genes such as those genes conjugated in specific tissue under a specific pathological conjugated in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABNS9589 represent colliponucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

                                                                                                                                                                                                                                                                                                                                                                                             present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from human heart from the human heart via microarrays. By measuring gene expression, probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular spe.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

                                                                 microarray, which can be used for measuring human gene expression in sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the print specification, but was obtained in electronic format directly from WI
                                                                                                                                                                                                                The present invention relates to human single exon nucleic acid probe (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cance such as lymphoma, leukaemia and myeloma. The present sequence is one of

Sequence 1, Application US/10010408

Publication No. US20020165185A1

GENERAL INFORMATION:
APPLICANT: John J. Castellot, Jr.
APPLICANT: John J. Castellot, Jr.
APPLICANT: John J. Castellot, Jr.
TITLE OF INVENTION: No. US20020165185A1el Heparin-Induced CCN-Like Molecules
and Uses Therefor

NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSE: LAHIVE & COCKFIELD, LLP
STREET: 28 State Street
CITY: Boston
STATE: MASSachusetts
COUNTRY: USA

COMPUTER: ISSACHUSETTS
COMPUTER: ISSACHUSETTS
OPERATING SYSTEM: PC-DOS/MS-DOS
